

I have watched the QuickTime movie prepared by Ed Hare, W1RFI, for the ARRL which records the Power Line Communications (PLC) signals recorded by him at several locations in several states where PLC trials are being conducted. I have been an amateur radio operator for over 40 years, have serviced two way radio equipment commercially for over 30 years, and have been active in law enforcement for 25 years. It is clear to me that such radiation (BPL) would be intolerable to any amateur radio operator and interference to law enforcement and emergency communications could result in interference to anyone who was trying to operate anywhere near those power lines. Permission to offer high speed data communications over power lines should not be granted by the FCC so long as these interference problems remain unsolved.
